

SHIVANSH GOEL

AI Product Engineer

+91 9458569110 | shivansh.goela12@gmail.com | Delhi, India | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Full stack developer who integrates LLMs into products people can actually use. Seventeen months of professional web development, plus two self-directed LLM products running in production: document-grounded retrieval over user-uploaded material, prompt design for schema-consistent output, and server-side Gemini calls with response caching to keep latency and API spend down. Comfortable owning the feature end to end, from retrieval logic to the interface that consumes it.

TECHNICAL SKILLS

LLM Integration: Google Gemini API, Prompt Engineering, Structured/Schema-Constrained Output, Per-User Prompt Context

Retrieval: Retrieval-Augmented Generation (RAG), Embeddings, Document Chunking, Semantic Search

Serving and Cost Control: Server-Side Model Proxying, API-Key Handling, Access-Key Authentication, Redis Response Caching

Languages: Python, TypeScript, JavaScript (ES6+), SQL

Backend and Data: FastAPI, Node.js, REST APIs, Supabase (PostgreSQL), Redis, Cloudflare D1

Tools: Git, GitHub, Firebase Tools, Cloudflare Workers, VS Code, Debugging

PROFESSIONAL EXPERIENCE

Full Stack Developer, Intern

December 2023 – May 2025

Tedforge Solutions Private Limited

India

- Seventeen continuous months on a client-facing product team – long enough to carry features from requirement to release rather than observe them.
- Built REST APIs in Node.js and wired them to React and Angular frontends, delivering data-driven features against real client requirements.
- Reworked MySQL and MongoDB queries on data-heavy screens to cut round trips and redundant reads, improving perceived responsiveness.
- Took bug reports through reproduction, root-cause analysis, and refactoring rather than surface patches, working in Git and GitHub alongside the product team.

PROJECTS

Quizify – Document-Grounded Assessment Platform [Live] | *Google Gemini, RAG, Embeddings, FastAPI, Redis, Supabase*

- Built an assessment platform that ingests a user's own documentation and generates topic-based quizzes from it on demand, replacing manual question writing.
- Implemented the retrieval pipeline end to end: chunking source documents, embedding them, and retrieving relevant passages to ground Gemini's question generation so quizzes stay on-topic instead of hallucinating.
- Constrained model output to a fixed schema (question, options, answer, explanation) through prompt design, and passed learner profile data into the prompt to vary difficulty.
- Routed every Gemini call through a server-side API route so no key is exposed to the browser, and cached responses in Redis to avoid paying for repeat generations.

FiTrack AI – Adaptive Fitness Platform [Live] | *Google Gemini, Python, Next.js, Supabase*

- Built a fitness platform that reads a user's logged workout, nutrition, and recovery history and adjusts recommended training intensity as that history changes.
- Passed each user's profile and recent performance into the Gemini prompt to produce goal-aware guidance in plain language rather than raw metrics, served through a server-side route.

GhostRelay – Privacy-First Email Aliasing Platform [Live] [Source] | *Next.js, React 19, Cloudflare Workers, Cloudflare D1, Resend*

- Built a privacy-first email aliasing platform on Cloudflare's edge network that forwards to a user's real inbox while keeping the real address hidden from spam, breaches, and tracking.
- Implemented one-click alias creation with per-alias enable and disable controls, letting users instantly stop spam and pinpoint which service leaked their email.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

2023

COER University

Roorkee, India

- Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering.

CERTIFICATIONS

Python 3.11 Programming with FastAPI Backend Framework | **TypeScript 5.2** – Microsoft

Angular 16 with TypeScript 5.2 and PrimeNG 16 | **Onsite Technical Internship – Trainee Software Developer (Full Stack)**
